

Simple Steps For Seriously Stronger Cyber Security

Hackers aren't wizards. They use simple methods to steal information and money. Simple steps can stop them. Here's what you should do.

Create Strong Passwords	
☐ Pick 4-5 letters at random,	, then choose an interesting w

	ck 4-5 letters at random, then choose an interesting word that starts with each ter.
☐ Ar	range the words into a phrase you can remember.
Prote	ect Your Accounts
	rip links and files in suspicious emails. Instead, go to the official website rectly, or contact the sender outside of email to verify that the message is legit.
	nable two-step verification to make sure you can get into your accounts, but meone who stole your password can't. Learn how at twofactorauth.org.
	se a password manager to create and keep track of unique passwords for all your accounts. (Links Below)
Prote	ect Your Devices
	se automatic updates for your devices and software. Make sure to reboot ice a month.
	nckup your data to a drive or service that isn't always connected to your vice. That way, if Ransomeware strikes you still have a backup.
Reco	ver From Being Hacked

☐ Change your passwords and check any financial and privacy settings.
